Visit 1 — 05/04/2021 (Tue) · New patient examination

S: Low-back stiffness and soreness for 3 days after moving furniture (05/01/2021). Worse bending and on rising in the morning. No leg pain, numbness or weakness. No neck, upper back or arm complaints.
O: Posture: mild antalgic lean to the right. **Lumbar** ROM: flexion 60° with pain, extension 20°, lateral flexion R 20° / L 15°. Tenderness and hypertonicity L bilateral paraspinals L3–L5, left QL. SLR negative bilaterally; Kemp's mildly positive left (local pain only). Lower-extremity reflexes, sensation and strength normal. **Cervical screen:** full, pain-free active ROM in all planes; no tenderness; upper-extremity neuro screen normal.
A: Lumbar sprain/strain (S33.5XXA) with segmental dysfunction, lumbar (M99.03). Cervical exam normal.
P: Lumbar and sacroiliac diversified adjustment; ice; home stretches (knee-to-chest, cat-camel). Re-check 1 week.

Visit 2 — 05/11/2021 (Tue)

S: 60% better. Stiff in the morning only; pain 2/10. Back at work without limitation.
O: Lumbar flexion 80°, extension 25°; mild left L4–L5 paraspinal tenderness. Neuro intact.
A: Lumbar strain, improving.
P: Lumbar adjustment; core exercises added (bird-dog, bridges). Re-check 1 week.

Visit 3 — 05/18/2021 (Tue) · Re-examination and release

S: No pain (0/10). No stiffness for 4 days. Full work and gym activity.
O: Lumbar ROM full and pain-free; no tenderness; SLR and Kemp's negative. Cervical ROM full and pain-free.
A: Lumbar strain — **resolved**.
P: Released to full activity. Continue home core exercises. Return as needed. Episode closed.
